Profile

Engineering manager with 10+ years of experience building and leading high-performing teams across healthcare, gaming, e-commerce, and enterprise platforms. Proven track record of **people leadership, technical strategy, and delivery in complex, regulated, and distributed environments**. Strong hands-on background paired with a coaching-oriented leadership style.

Fluent in English, Japanese, Romanian.

HIPAA, DevSecOps + Experienced leading multicultural, remote, and cross-functional teams.

Patents:

US 10,454,599 B2 - System for visualization of electromagnetic wave distribution and collaborative web-based design for optimal distribution of emitters – co-inventor, granted 2019

JP 7150002 B2 - Low noise collaboration system – inventor, granted 2022

Core Leadership Strengths

- Engineering management & team leadership
- Hiring, mentoring, and performance management
- Technical strategy & architecture ownership
- Cross-functional collaboration (Product, Data, Design, Compliance)
- Agile delivery, roadmap planning, and execution
- Distributed systems & cloud platforms
- AI-assisted data pipelines and event-driven architectures

Experience

Sr Manager + STAFF Engineer | Signify Health — May 2024 – PRESENT

60% hands-on coding

- Lead two cross-functional teams (application engineering + data engineering) responsible for healthcare data pipelines and AI-enabled analysis tools.
- Eliminated a multi-team, 3-week manual data cleanup effort by architecting a new ETL pipeline that automated the year-end rollover process, improving throughput approximately 100x and reducing what previously consumed engineering resources through the holidays to a single-day automated verification.
- Accelerated deployment frequency from weekly to approximately 4x per week by restructuring ownership boundaries and automating the release pipeline across a 7-person engineering organization, sustaining delivery through 4 leadership transitions in a single year.
- Engineered a visual rules engine over a 6-month research effort that replaced brittle SQL stored procedures with a diagram-based reasoning system, enabling management of thousands of business rules spanning states, lines of business, client policies, and internal regulations.
- Established a prod-shadow testing environment that validated pipelines against real production data with anonymized results, increasing release confidence while preserving compliant healthcare data handling practices.
- Pioneered a unified QA system consolidating approximately 25 disparate testing processes across the organization by leveraging AI-generated test data mirroring production patterns, orchestrating interconnected team pipelines for end-to-end validation and automated alerting.
- Owned technical direction across a polyglot services architecture spanning Go, Python, C#, TypeScript, Node.js, and Kafka-based event pipelines, partnering with Product, Data Science, and Compliance to deliver solutions handling sensitive healthcare data.

Engineering Manager & Systems Architect | Pixelberry Studios — Feb 2022 - Aug 2023

40% hands on coding

- Managed and mentored a team of 4 engineers, overseeing frontend, backend, and cloud infrastructure
- Led the design and delivery of a custom CMS platform supporting multilingual, geo-adaptive content across web and mobile products
- Transformed the company's content strategy by architecting an enterprise-level multilingual CMS from scratch, replacing a fragmented network of social media operators across the

Americas and Asia Pacific with a centralized platform featuring independent scheduled releases per culture, a unified catalog, event billboard, and multi-market advertising system

- Instituted 2-3 weekly pair-programming sessions that surfaced bugs in real time before pull requests, generated product feedback with business value propositions directly from technical discovery, and produced the highest team morale in the organization.
- Orchestrated a 4-person engineering team across frontend, backend, and cloud infrastructure (React, Express.js, DynamoDB, AWS), serving as technical owner while cultivating engineers' autonomy and expanding their decision-making scope.
- Defined the technical roadmap in partnership with product leadership, aligning engineering priorities with business goals across web and mobile game products.

Front-end Developer | Rakuten Japan — Oct 2021 - Jan 2022

- Contributed to a mobile eSIM management platform used at scale
- Architected front-end admin dashboards and reporting tools for a large-scale eSIM consolidation ecosystem serving the entire Rakuten network, working within a multicultural, distributed team in a high-standards enterprise environment.
- Championed React best practices and performance optimization techniques across the engineering team, identifying and eliminating front-end bottlenecks while collaborating closely with backend and QA teams.

Team Lead | XICA Japan - Jun 2018 — Jun 2020

- Led web and cloud initiatives with a focus on data-driven and ML-adjacent applications
- Refactored approximately 200 files of pure HTML, JavaScript, and CSS into a proper TypeScript and VueJS architecture, transforming module additions, client-specific theme customizations, and API contract changes from laborious manual efforts into streamlined operations that dramatically accelerated feature delivery.
- Galvanized a 4-person international engineering team by deepening foundational expertise in linear regression analysis and D3 data visualization while decomposing a data-processing monolith into a series of independent, manageable pipelines.
- Cultivated team growth through structured mentorship, after-work Japanese language classes for 3 engineers, and targeted career development that resulted in a direct report's promotion after his contributions expanded from core analytics algorithms into full API services development.

Senior Web Developer | BOSTON SCIENTIFIC · COMPASS PROFESSIONAL HEALTH SERVICES · TAILLIGHT — MAY 2010 - MAR 2017

- Boston Scientific · Compass Professional Health Services · TailLight
- Progressed through senior roles delivering production web and mobile applications using modern JavaScript frameworks and cloud services, forging a foundation in scalable system design and stakeholder collaboration.

Education

- B.S. in Quality Management and Commerce | Academy of Economic Studies, Bucharest, Romania

Certifications

- MIT - Architecture of Complex Systems
- NSF - iCorps
- Certified MongoDB DBA from 10gen.com

Technical Expertise

- Distributed & event-driven architectures
- Microservices, REST / gRPC
- Cloud platforms: AWS, GCP, Azure
- Kubernetes, Argo/Kargo, Kafka, SQS, ELB, Docker, CI/CD pipelines
- Datastores: MongoDB, DynamoDB, PostgreSQL, MySQL,
- Frontend frameworks: Vue, Angular, React

Languages

English: Native

Japanese: Fluent

Romanian: Native

French: Intermediate

Selected Project Leadership

Pixelberry Studios CMS Platform

- Initiated and architected a multi-platform CMS supporting global releases
- Enabled scheduled content publishing and regional customization
- Led both technical execution and team delivery

LVMH Japan – HR Mobility Platform

- Delivered web and mobile applications end-to-end
- Coordinated directly with HR stakeholders in Japanese
- Owned architecture, deployment, and app store lifecycle

About Me

International engineering leader with experience living and working in Europe, the U.S., and Japan. Known for bridging technical depth with human-centered leadership. Passionate about building teams that scale sustainably, communicate clearly, and deliver real-world impact.
